Default Message Code Table

This function allows you to select message codes to be checked by default after each job termination.

► To select message codes for checking

- Select the option **Global Message Code Table** from the System Services Menu.

The Default Message Code Table appears with a list of all current codes:

20.11.01	*** Entire Operations *** Default Message Code Table	15:48:10
<hr/>		
	Usage: These message codes will be searched by default during each End-of-Job Checking.	
	Message Code	Severity
	ABC1234____	0012
	_____	_____

Field Descriptions: Default Message Code Table

Field	Meaning
Message Code	The code, e.g. IEF999I
Severity	<p>The highest resulting severity code of a job will be compared with the default condition code value to be treated as not ok. In other words: The detection of the message causes a simulated condition code setting.</p> <p>The default condition/severity code can be defined in Entire Operations Defaults by selecting the OS/390 option under Operating System Specials. For more details, see Defaults for OS/390 and MVS/XA in the subsection Entire Operations Defaults.</p>
OpSys	Operating system, for which the message code is valid. If none is specified, the message is scanned for all operating systems.
